

What are the effects of pollution on ecosystems?

Examining the wonder of the effects of pollution on ecosystems.

Experience English immersion classes with students from Kobe Ryukoku High School. This seminar focuses on hands-on biological experiments, enabling students to observe and understand the effects of pollution on ecosystems. Students will gain a better understanding of environmental protection and sustainability. Pollution is one of the most pressing environmental issues affecting water, soil, and air. In this lesson, students will explore the effects of pollution through a biological experiment that replicates an environmental problem. This activity fosters critical thinking and encourages students to consider sustainable solutions.

講師の紹介

Honey Laluna Bachelor of Secondary Education major in Biology (Graduated as Cum laude in 2014 at Mindanao State University-Iligan Institute of the Philippines) Master of Science in Teaching major in Biology (Completed all academic units in 2017 at De La Salle University, Manila, Philippines)
